Workshop Purpose

To review and discuss ongoing wind energy prediction related research and development activities being conducted at NCAR, NOAA, NREL, and by local university researchers.
We received requests from NOAA, NREL and our university collaborators to hold a workshop to share technical information on our wind energy research.

So, this meeting is in response to those requests. It was meant to be small and interactive.

Interest has been strong, so we expanded the invitation list as we received inquiries.
Workshop Goal

- Exchange information
- Learn from each other’s work
- Identify collaborative opportunities
- Enhance collaborations
- Improve our understanding of wind energy prediction challenges
