Subseasonal Tropical Cyclone Forecasts in the Western North Pacific Using the NCEP and ECMWF Ensemble Models

Hsiao-Chung Tsai, Han-Yu Hsu

*Dept. of Water Resources and Environmental Engineering
Tamkang University, Taiwan*

**Tzu-Ting Lo, Meng-Shih Chen, Yun-Jing Chen, Jui-Ling Kuo**

Central Weather Bureau, Taiwan

Average : 5 typhoons/year

Typhoon Hazards vs. Water Resources

JTWC Best-Tracks: 1980-2010   Vmax(kts)

Cumulative Rainfall
5-10 August, 2009
(Typhoon Morakot)

**Mean & Median= 5**

2022 Typhoon Season
No typhoon made landfall
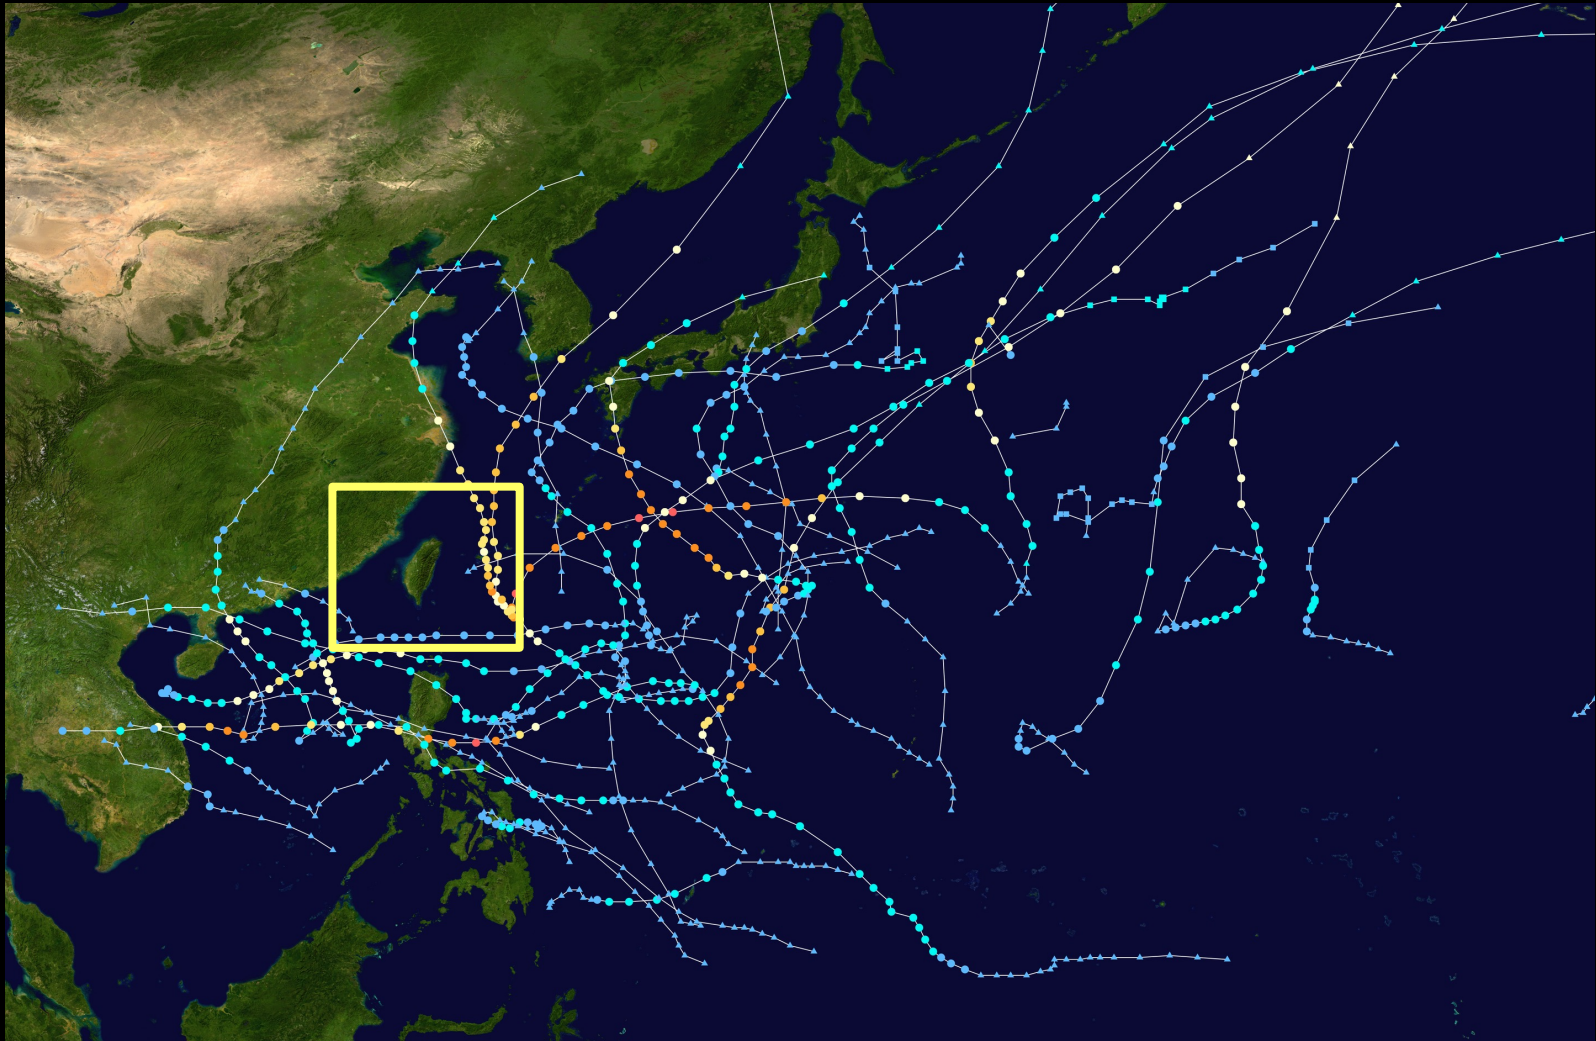

Reservoirs in Taiwan (18 April 2023)
Low water levels in most of the reservoirs

How long do we have to wait for the next typhoon coming after the end of Mei-Yu season ?

1st TC Gap after the end of the Mei-Yu season

1st TC Gap After 30 June (Intensity>=25 kts)
Taiwan(21-26N,119-125E): Mean=25.2; Median=17.0 (days)

Tsai and Elsberry (2013)
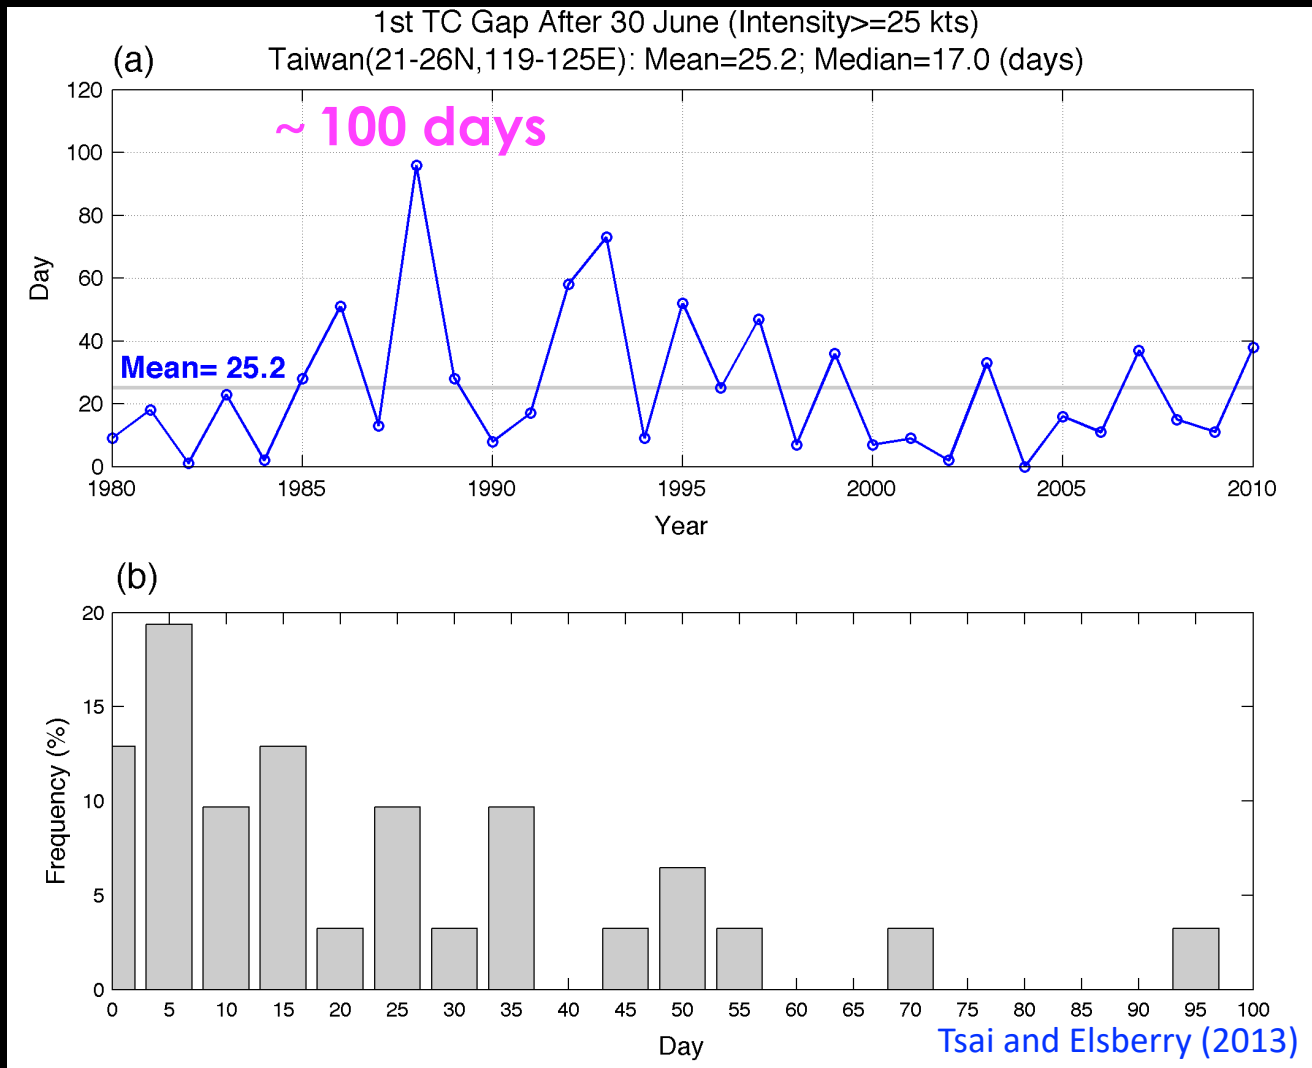

CWB TC Tracker
Tsai et al. (2011)

- CWB has been monitoring the tropical cyclone (TC) forecasts beyond 7 days since 2008
    - 21-member NCEP GEFS real-time forecasts

Starting from 2020... **CWB TC Tracker 2.0**

https://tctracker.cwb.gov.tw/

CWB TC Tracker 2.0
https://tctracker.cwb.gov.tw/
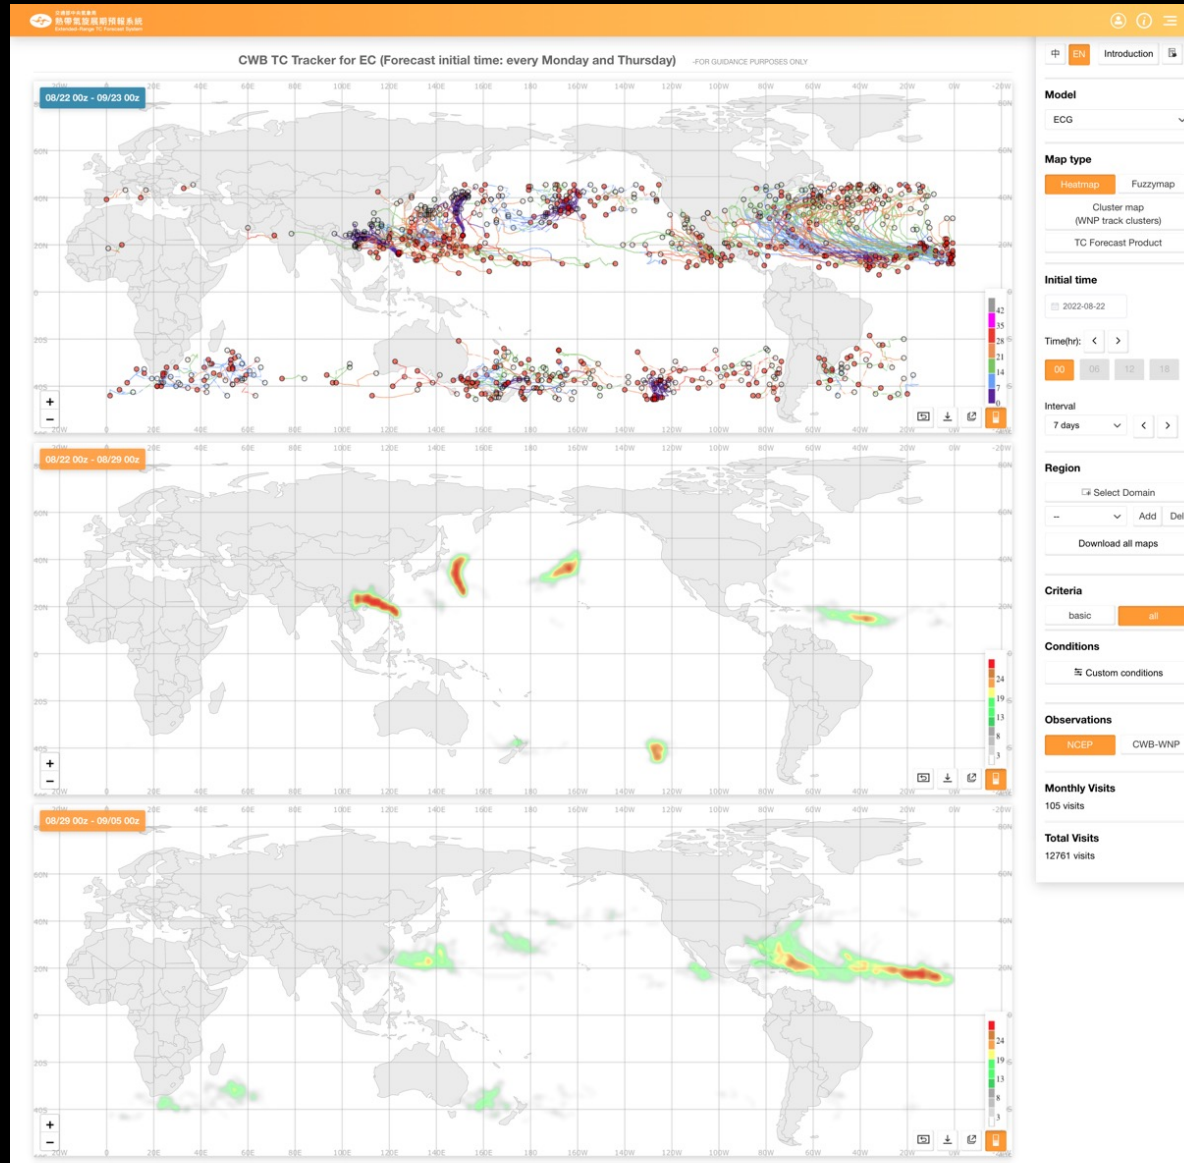

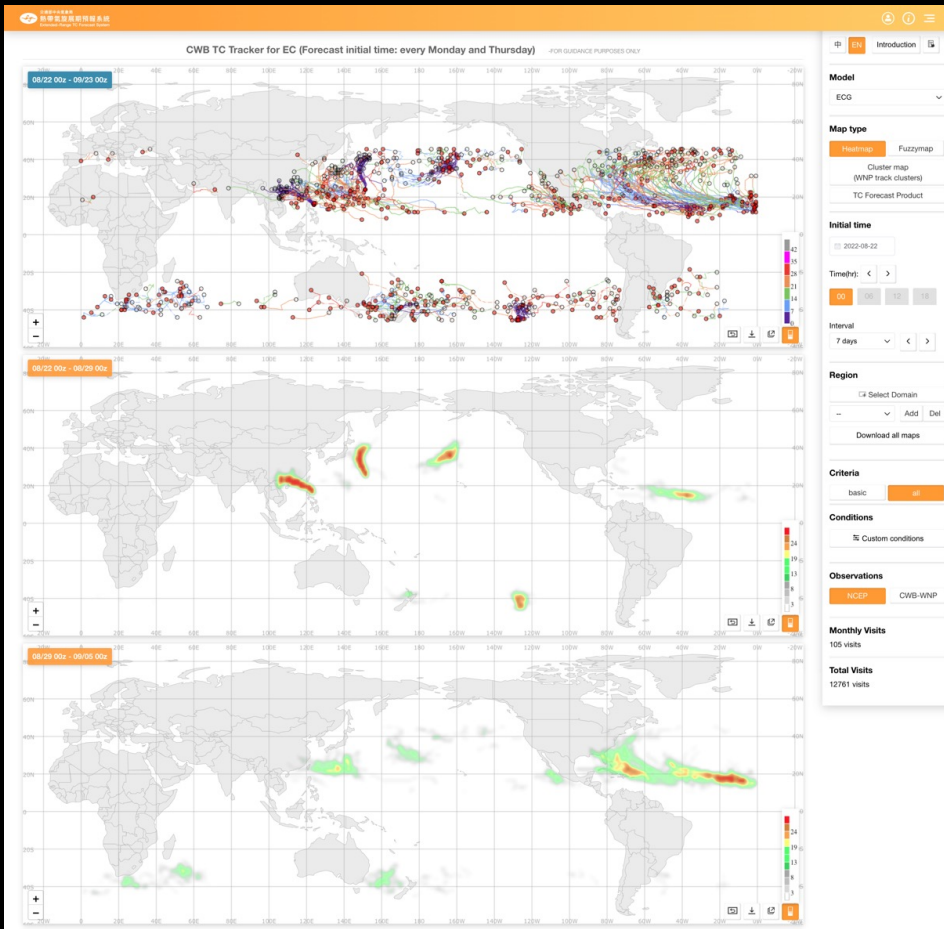

- Forecast lead-time: 4 weeks
- Multiple models:
  - NCEP GEFSv12
  - ECMWF 46-day ensemble (password protected)
  - NCEP CFSv2
  - CWB1T1 (CWB 1-tier climate forecast model)
- Users can download the TC tracking results (ascii files) and create their own products.
  - Forecasters at CWB and PAGASA are jointly using the CWB TC Tracker 2.0.

Fuzzymap (Pointwise TC Detection)
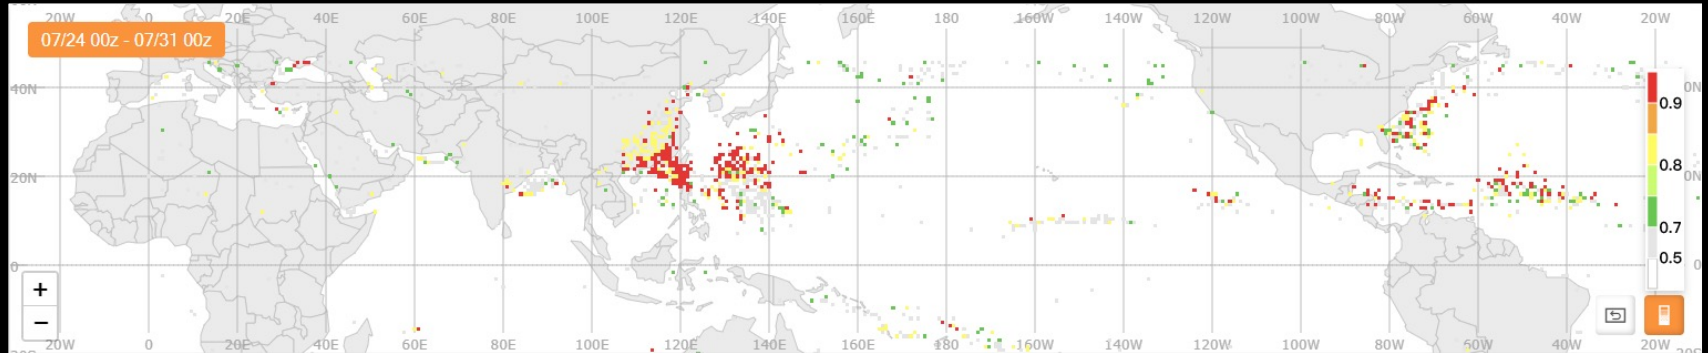

Heatmap (TC Strike Probabilities)
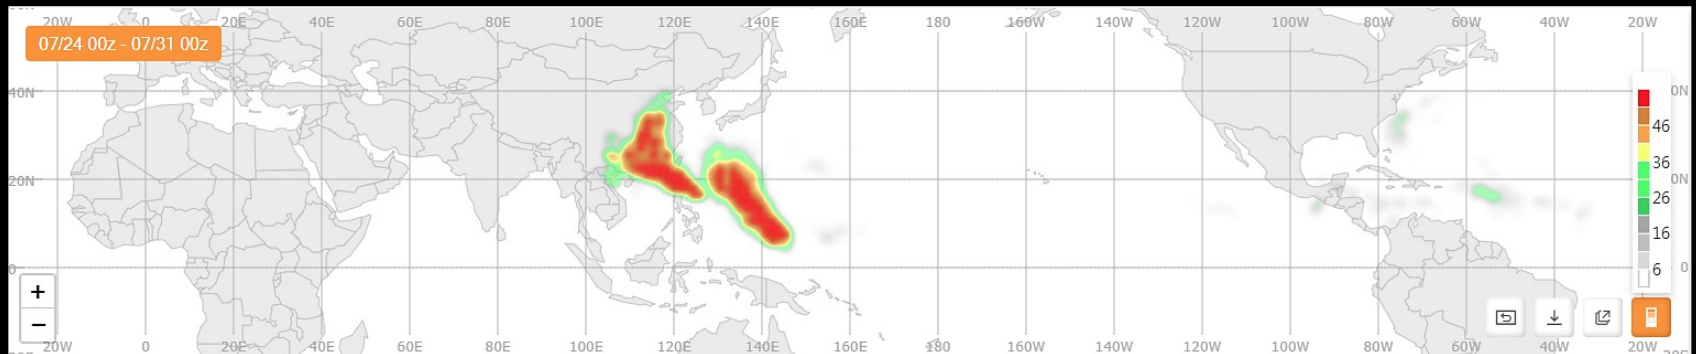

Track Clusters (Spatio-Temporal Track Clustering)

TC Threat Potential

Forecast Verifications

- Weeks 1-4 TC forecast skill in the western North Pacific
  - Realtime forecasts
  - Long-term reforecasts
  - Research to operations (R2O)

Typhoon Sepat (2019)
~11 days in advance

TC Forecast Skill Verifications
GEFSv12 Weeks 1-4 Reforecasts

- Reforecasts during 2000-2019

- 11 ensemble members

- TC strike probabilities in the western North Pacific

  - ROC curve, reliability diagram, performance diagram, PR Curve, etc.

TC Forecast Skill Verifications
GEFSv12 Weeks 1-4 Reforecasts

Performance Diagram (based on the Youden's Index)
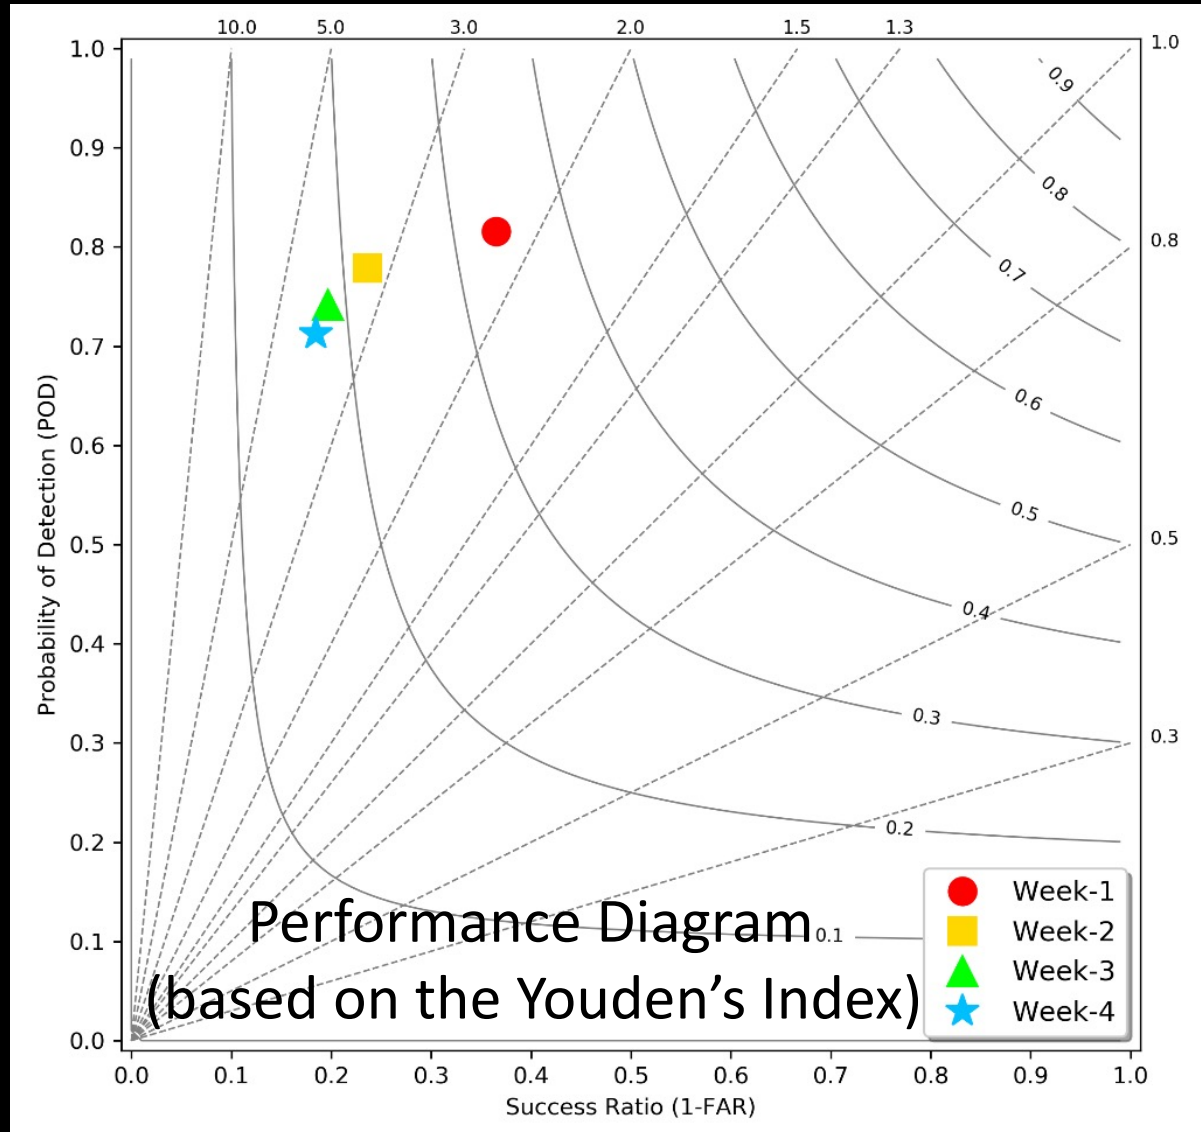

TC Forecast Skills
under Different Large-Scale Environments

1. **ENSO**

2. **WNPMI (Western North Pacific Monsoon Index)**

3. **MJO (Madden–Julian Oscillation)**

    - Eastward propagation along the equator

4. **BSISO (Boreal Summer Intraseasonal Oscillation)**

    - Northward/northwestward propagation

WNPMI
(Western North Pacific Monsoon Index; Wang et. al 2001)
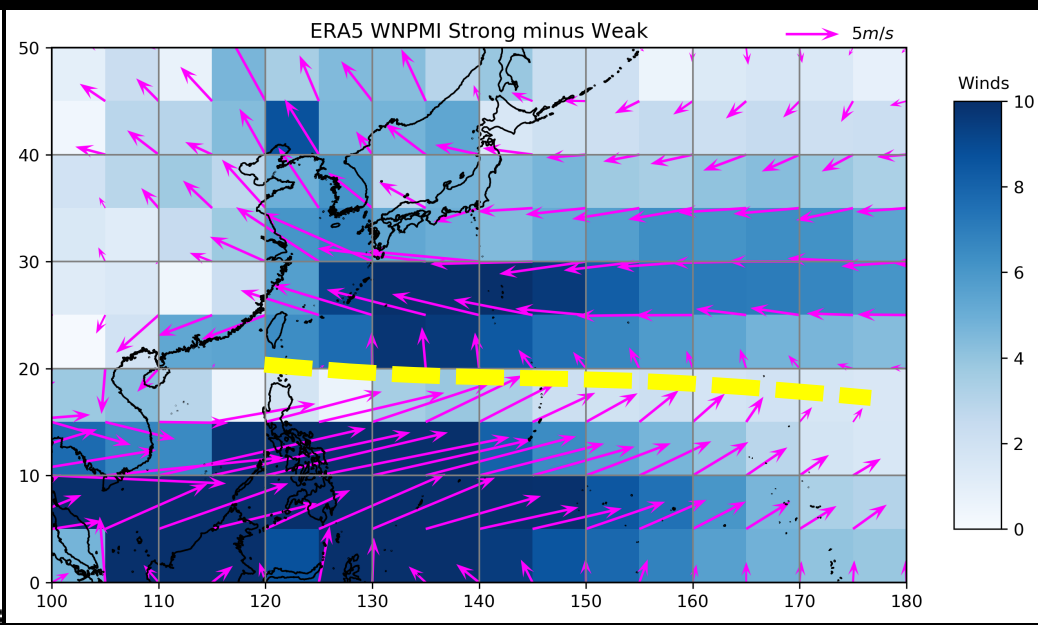

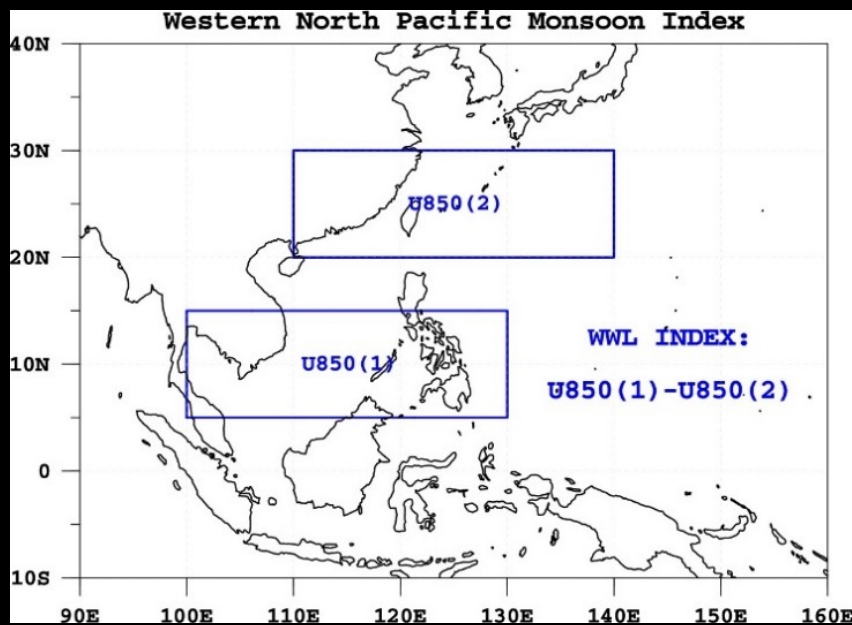

WNPMI

WNPMI is divided into 5 categories based on the cumulative probabilities
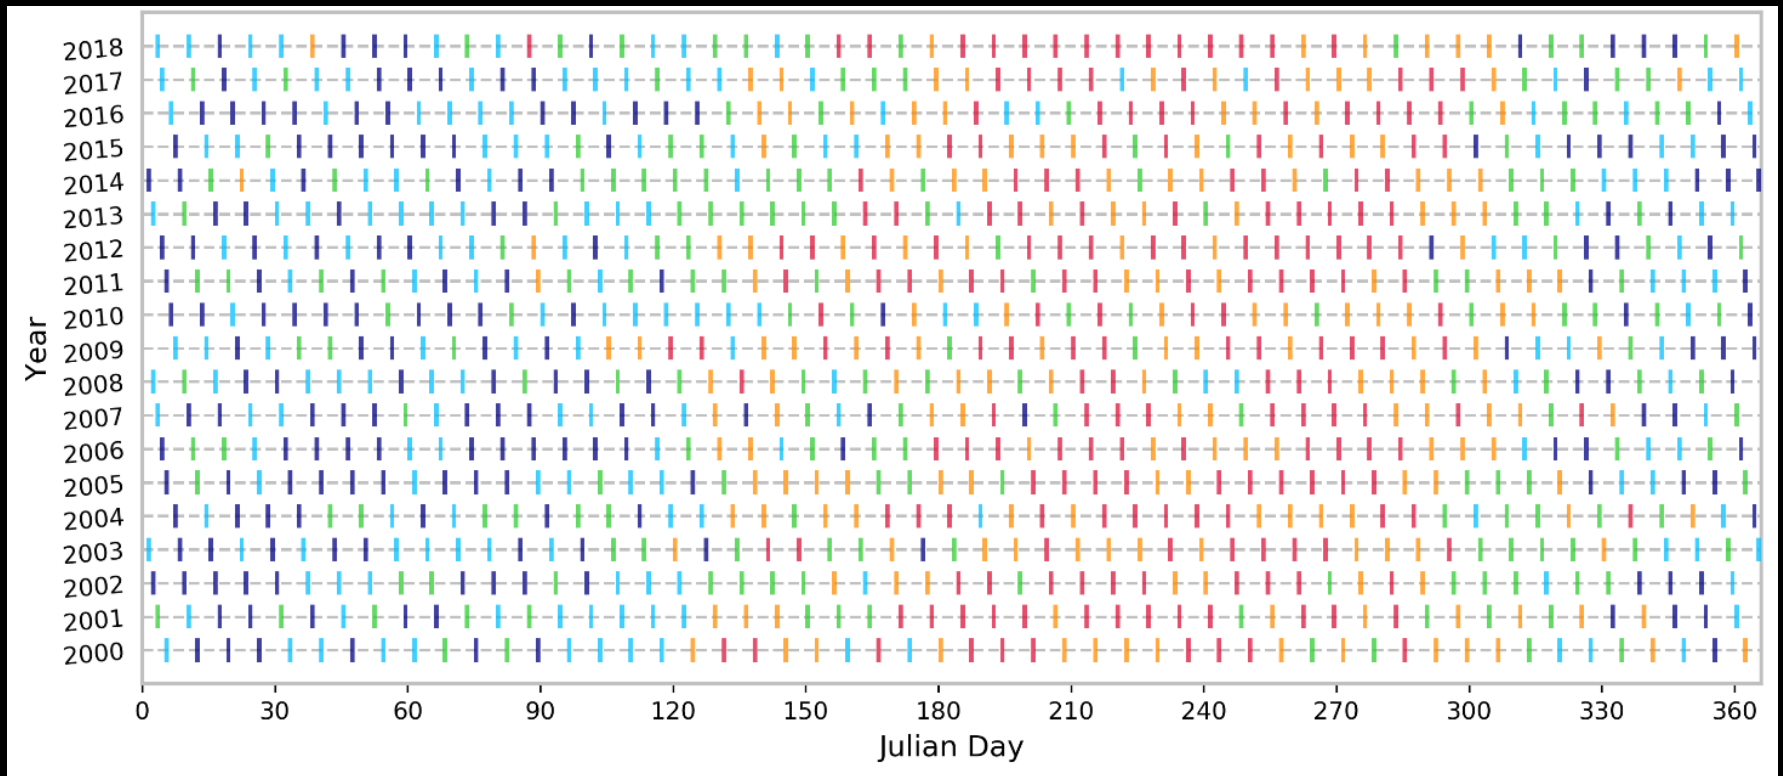

JTWC Best Tracks
Best tracks are divided into 5 groups
based on the WNPMI categories
GEFSv12 TC Tracks
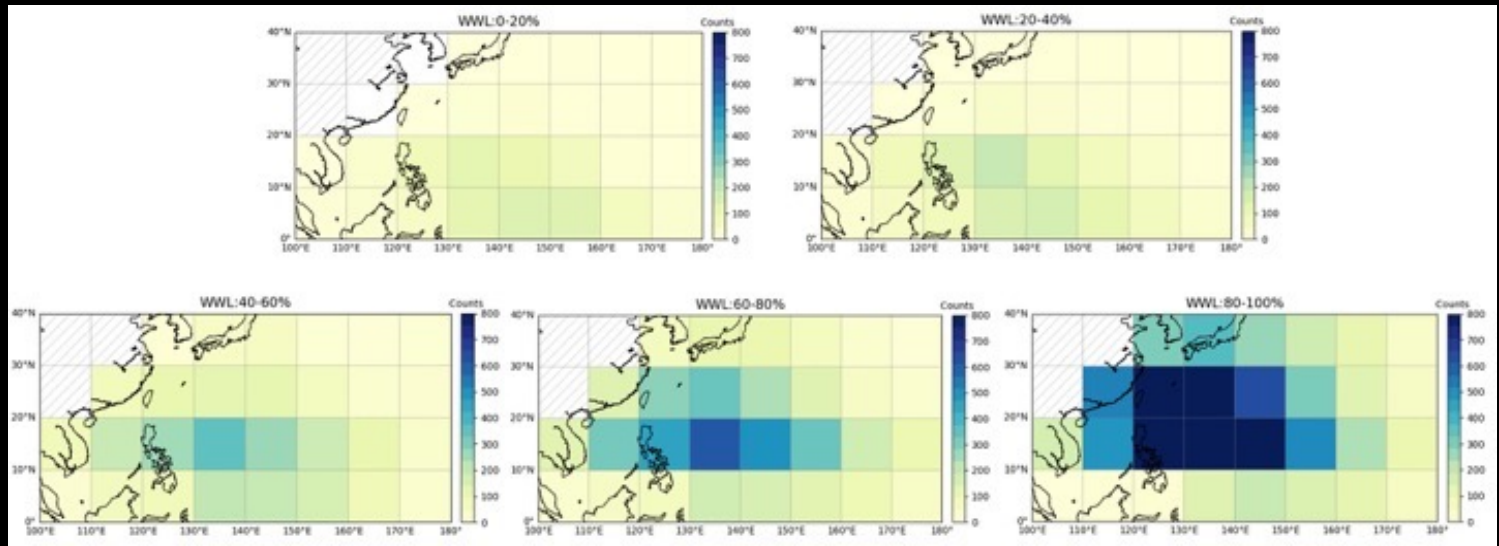

Best Tracks
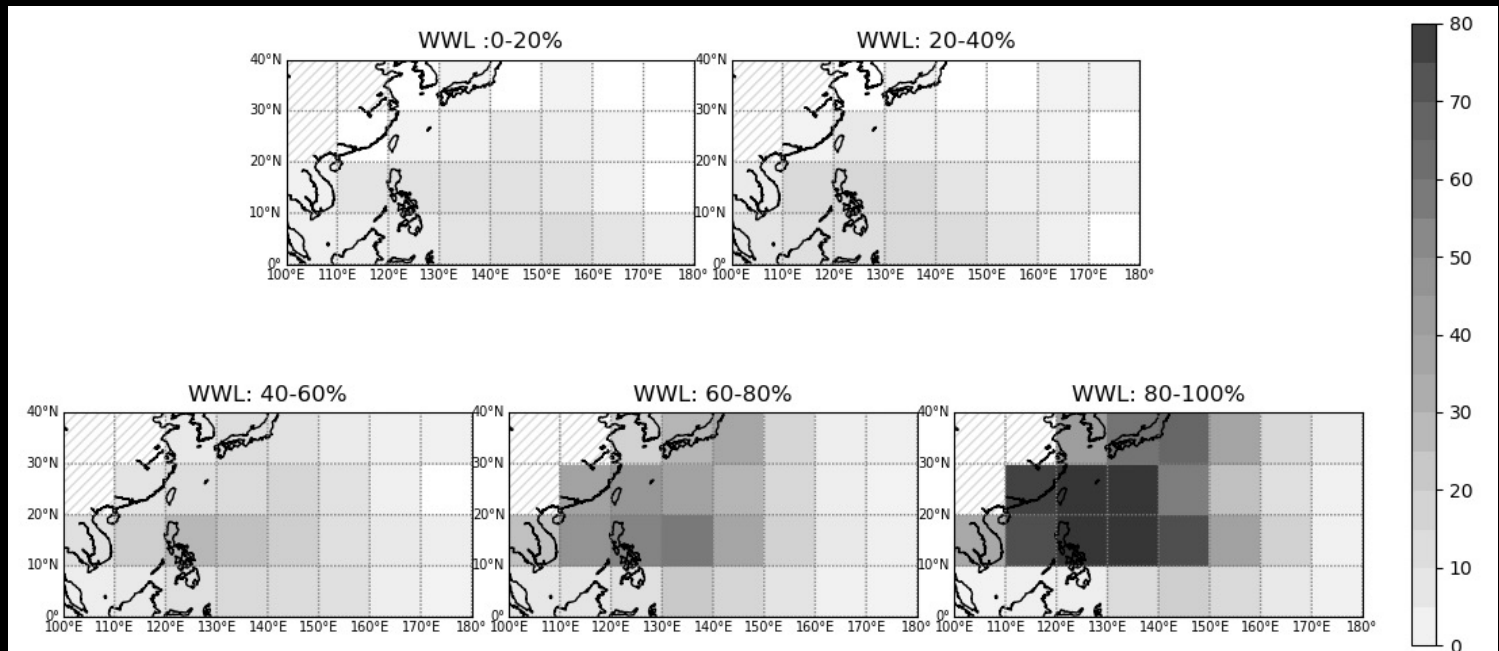

GEFSv12 Reforecasts: Week-1
Precision-Recall Curve & F1-Score
Larger WNPMI→ Better TC forecast skill
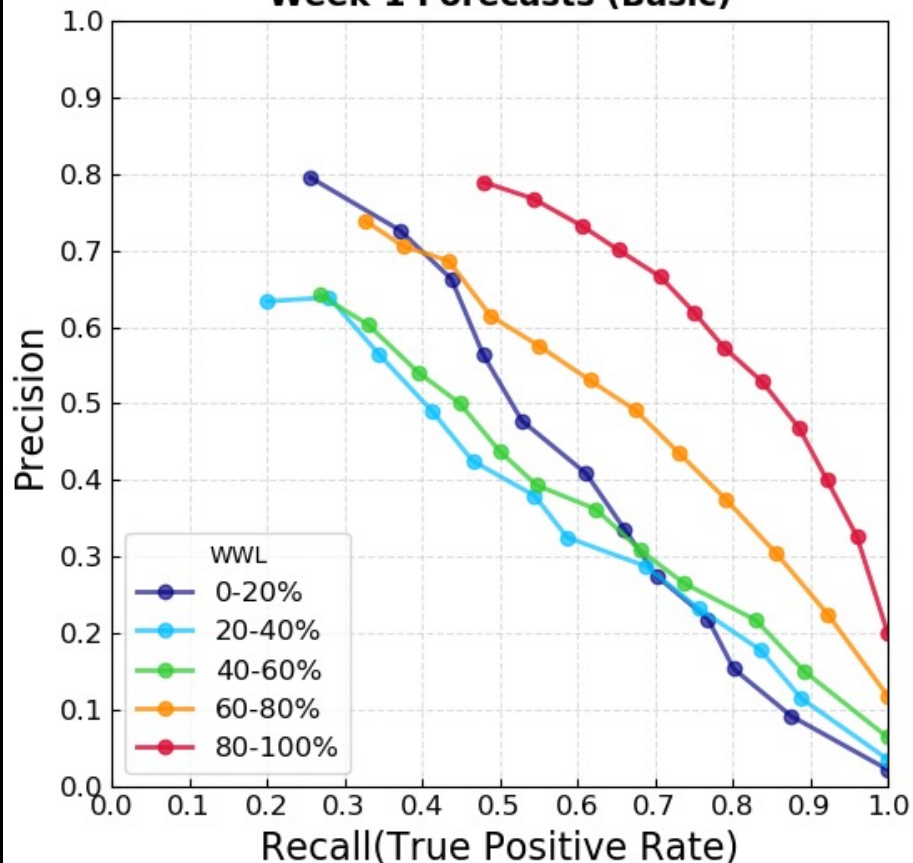

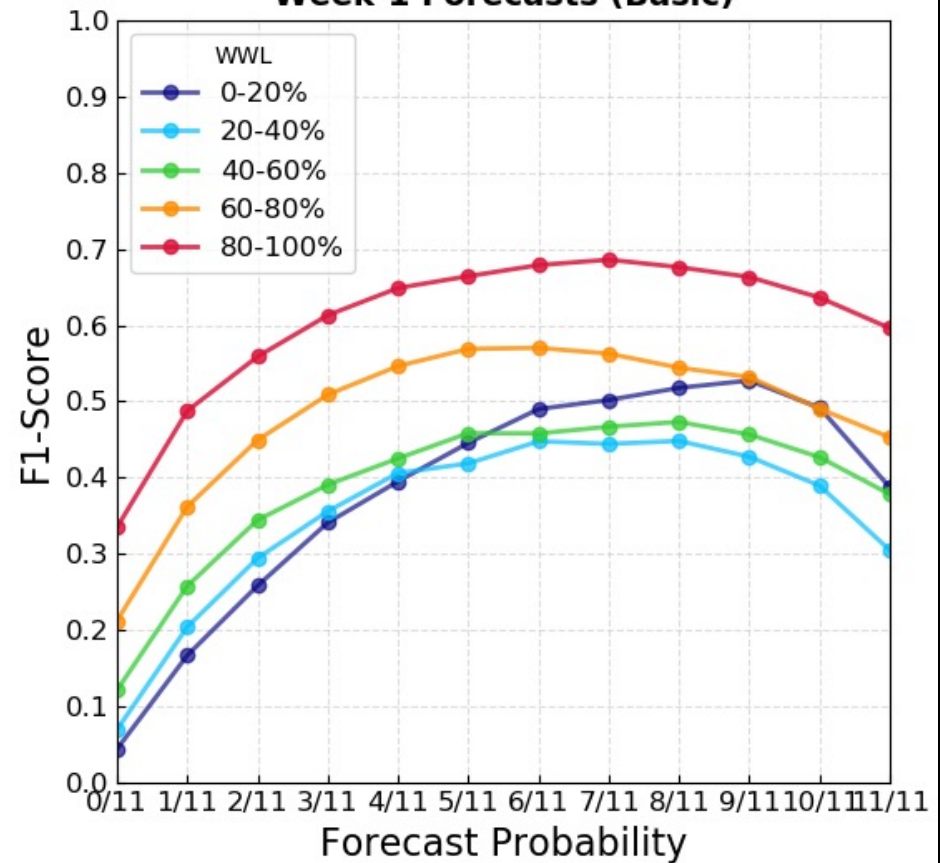

GEFSv12 Reforecasts: Week-2

Precision-Recall Curve & F1-Score

## Larger WNPMI→ Better TC forecast skill
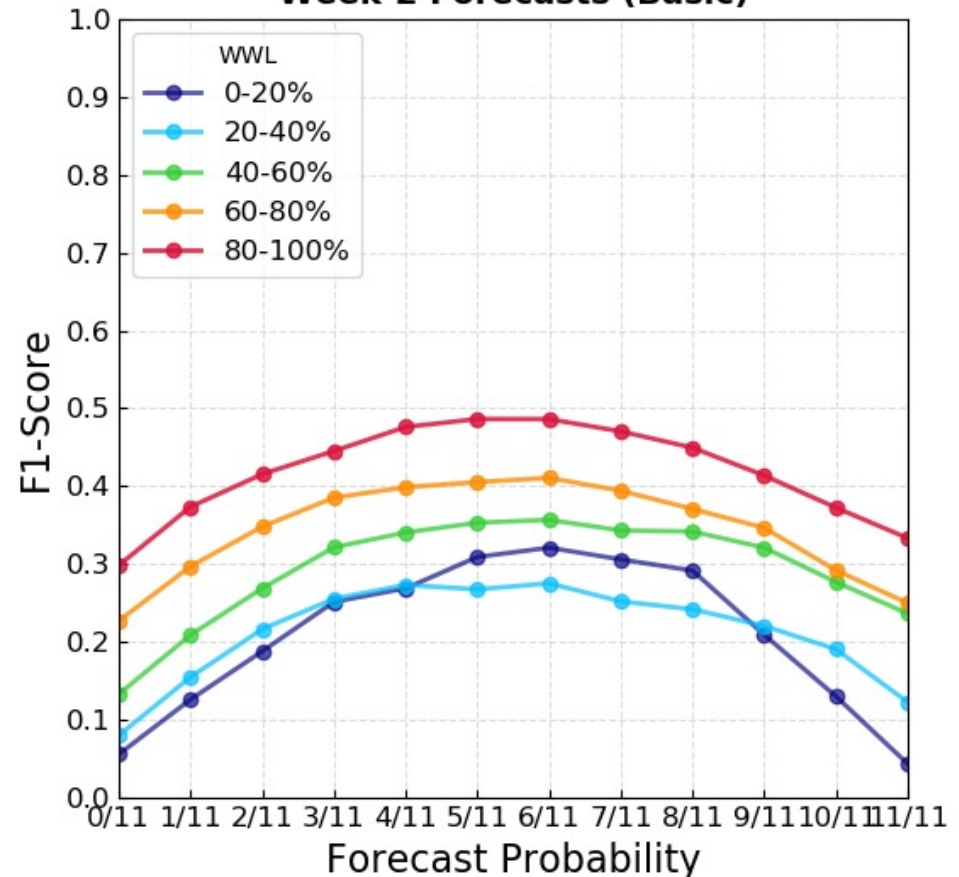

# GEFSv12 Reforecasts: Performance Diagram
Similiar results can also be found in the ECMWF ensemble forecasts.

# New TC Forecast Product at CWB
WNPMI + Track Clusters

WNPMI is used to indicate the *confidence level of* the current forecast

Typhoon Doksuri
(20-29 July 2023)
